TRIMO
SAW VISE SET
SPECIAL FOR THE DAIRY TRADE

NO POCKETS TO GATHER BACTERIA OR MILKSTONE DEPOSIT

Because it makes a 100% square cut for perfect bearing against internal fitting shoulder, there is no possibility of a "pocket" to gather bacteria or "milkstone deposit" when this TRIMO SAW VISE is used.

SPECIAL DAIRY SET

For Sanitary, Tinned Copper or Stainless Steel Pipe

1 Base
1 1" O.D. Unit
1 1½" O.D. Unit

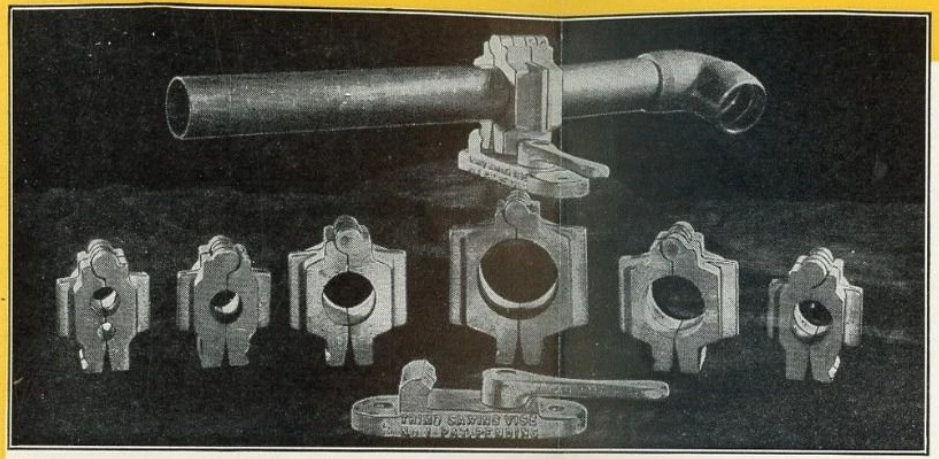
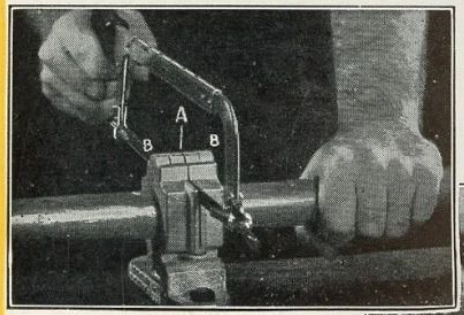
New TRIMO
SAW VISE SET
FOR THIN-WALL TUBING

FOR PERFECT THIN-WALL TUBING INSTALLATIONS

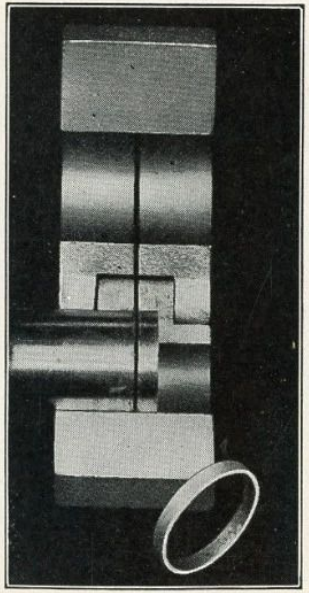


1. Every cut 100% square . . for perfect bearing against fitting shoulder. No time wasted truing up with file . . no wavy cut due to play in saw.
2. Tubing sized and held to round while being cut . . making it easy to slip in fitting. Tubing cannot be forced out of round no matter how much pressure is put on vise. Trimo Vise brings tube back to round if it has previously been forced out of line . . saves great deal of tubing which would otherwise be thrown away.
3. No damaged tubing to cut off or throw away . . both ends of tubing prevented from forming "break-off burr" or "flat lip" at completion of cut.



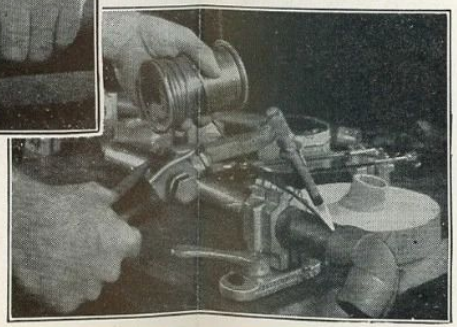
ABOVE—This tool assures the 100% sized, round, and square end cut—"for exact clearance between tubing and fitting—and for complete bearing against internal fitting shoulder"—for a perfect job with no leaks.

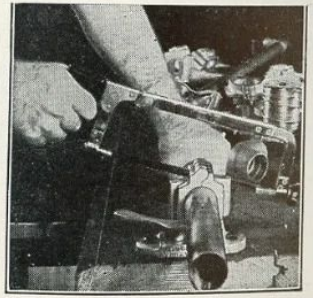
RIGHT AND BELOW—Vise may be bolted to bench or carried as a hand tool on the job.



ABOVE—Every cut 100% square. Tube cannot break off or form lip at completion of cut. Bearing surface from A to B sufficient to hold tube until needed—even after cut is made.

RIGHT — Tubing held to round while being cut. Vise also holds tubing while being soldered.





RIGHT—Will hold shortest pieces of tubing, and give true cut even when shortening measure is only a fraction of an inch. Easy to line up cutting slo. in Vise with cutting mark on tubing.
